## ABOUT

My name is Alexandr and I am a Mobile and Full Stack web developer with more than 7 years of experience.

I love my job and hungry for new skills and technologies. I like to work on interesting projects and meet interesting people. Workaholic and perfectionist. Native Russian and upper Intermediate english speaker, but constantly improving my level.

I have a lot of experience with **React**, **ReactNative** and **TypeScript**, as well as **PHP** (mostly **Yii2**). Also, I used **Vue2 (Nuxt SSR)** for frontend and a **microservice** architecture pattern with queues (**RabbitMQ**) through **RESTful**. For databases, typically use both **PostgreSQL** (primarily) and **MySQL**. I am also experienced with **Swift** as iOS (available on App Store) and macOS apps. Love to build full-cycle products (Backend + Reactive Frontend + Mobile app through Restful). Complete understanding of DevOps for Web stack (including **Gitlab CI/CD**, **Docker**, **Nginx**, **Postfix**, **TCP/IP**, **Bash**, etc.)

The latest mobile project I'm working on is a cross-platform mobile app for my company. Under the hood it uses a lot of techniques like a Restful communication, Map API, Camera API, Background jobs, etc. The app available at [AppStore](#) and [Google Play](#). Also there is my Swift based app (from 2018) for iOS [here](#). Both apps are entirely written by me. And [here](#) is my last open source library for React Native I wrote for my app.

I fully understand how the modern web and mobile apps work and how to make web applications not only fast but also efficient. I love UNIX-based systems and have extensive experience with Debian and MacOS. In friends with SOLID, DRY, KISS principles. I have participated and successfully completed the annual Hacktoberfest event 3 times in a row.

And finally, some links to my *public* web projects:
